Abstract (en)
[origin: EP1842673A2] The method involves measuring quality measurement data of a printed sheet by an optical detection unit and measurements and force actions of machine units by detection units. The data of the measurement are provided to evaluation and control devices, and the settings of the operating conditions or movement sequences of a plate cylinder and/or a rubber printing blanket cylinder is changed by the control units based on the detection of the quality measurement data and the measurements and force actions of the machine units. An independent claim is also included for a device for arranging and controlling a printing job in a printing machine.
