Abstract (en)

[origin: EP1842784A1] The standing properties of the film bag standing on the base (3) are improved by a continuous blind heat-sealed seam (6). Seam must be folded over when the base is unfolded. A continuous mechanical weakening (7) is a separately produced adjacent to the seam. The weakening was produced by light punching (12), small cut-outs, stamping or laser treatment. The film (5) has punchings at the ends, which lie down once the film close to the base is folded. An independent claim is included for a method of producing a film bag.
