Abstract (en)

An additive carrying cartridge for mixing the additive with the content of a container comprising a cylindrical additive containing body (1) having a closed upper base (2) and an open lower base (3) sealed by a sheet of breakable material (4). The perimetrical rib (5) in the central part of the containing body (1), the diameter of which is greater than the diameter of the mouth (11) of the container (10), the containing body (1) being divided into a first portion (6) having a plurality of broken sections joined to each other defining a bellows and a second portion (7). The additive (8) occupies a volume inside the containing body (1) defining a level the distance D of which, measured from the lower base (3) of the second portion (7), is greater than the distance E between said lower base (3) and the upper base (2) of the first portion.
