Abstract (en)

[origin: EP1842814A2] The apparatus has supports displaceable in a direction parallel to each other between an outer reload position and an inner supply position. A set of shafts (6, 8) on the supports extends parallel to the direction and is adapted to carry rolls (1, 2) of a material strip (3). A feeder unit pulls off the strip of one of the rolls in the supply position of the respective support. A cutter (10) on each of the supports cuts the respective strip, and a glue joiner (11) on each of the supports glues a leading end of the respective strip. A direct-current motor is provided for driving a feed roller.
