Abstract (en)

[origin: EP1842824A2] The truck (10) has a loading rod (20), a loading fork (22), and a radio frequency identification (RFID) transmitting and receiving unit, whose transmitting and receiving area is arranged on the area of the rod and the loading fork. A fork occupancy sensor is provided to detect load on the loading fork. A control unit initiates an activation of the transmitting and receiving unit for receiving data from an external radio frequency identification transponder, when the load is detected by the sensor.
