Abstract (en)

[origin: EP1327732A1] Ceiling edge plate (5) made of light-weight material for building construction comprises a reinforcement (21) to increase flexural strength. The reinforcement is arranged at least partly in the region of at least one of the plate surfaces (c, e, f) and is connected to the lightweight material. Preferred Features: The reinforcement is a lattice fabric made of glass or aramide fibers, a lattice made of steel, a bend-resistant reinforcing plate, a reinforcing profile, a protective element or a protective profile. The light-weight material serves as a matrix or base for the reinforcement.
