Abstract (en)

[origin: EP1842991A2] The terminal (1) has a mimic indicator (4) that indicates a direction indicating figure in an active condition. The indicator comprises two individual indicating units (5a, 6a), where one of the units indicates the direction indicating figure. The individual indicating units comprise a lamp that is controlled in a group by a control unit. The indicators emit multi-colored light, where color of the emitted light is correlated with a specific function of the indicator and operating condition of the terminal.
