Abstract (en)

[origin: EP1843100A2] The invention relates to a device for exhausting air, comprising an exhaust device provided with an air inlet, an air outlet and connecting means for connecting the air outlet of the exhaust device to a central mechanical ventilation system (cmv) provided with a first fan of a building, with a second fan to enable a better exhaustion of air at the exhaust device than by means of the cmv, wherein means are provided for diverting at least part of the air flow from the air outlet of the exhaust device away from the connection to the cmv. The invention also relates to a connecting device for connecting an air outlet of an exhaust device to a cmv and to a building provided with such a device. The invention further relates to a method for connecting an exhaust device to a cmv.
