Abstract (en)
Game timer comprising a timing device (4), and an end-of-game detector (6) connected to the timing device (4) for detecting an end of a game play. The game timer further comprises a first indicator (1) and a second indicator (2) connected to the timing device (4). The timing device (4) is arranged to start a first timer upon receiving a signal from the end-of-game detector (6) indicating the end of the game play, to indicate on the first indicator (1) a representation of the value of the first timer, and to indicate on the second indicator (2) that the value of the first timer exceeds a start time value. The start time value indicates the intended maximum time period between an end of a game play and a start of a new game play.
