Abstract (en)

[origin: EP1843306A2] The method involves recognizing an emergency access in a motor vehicle. A radio communication from an emergency device to a public safety answering point is established, and temporary identification data is assigned to the radio communication. Temporary identification data is stored in the emergency device. Minimum data information for the authentication of the vehicle and determined position data for describing the position of the motor vehicle are transmitted. Independent claims are also included for the following: (1) a method for controlling a receiving device for receiving an emergency call (2) an emergency device attached to a vehicle (3) an emergency call centre with a comparator device (4) an emergency call system for development of emergency call information.
