Abstract (en)

[origin: WO2006081833A1] A flat mop cover for a mopping device comprising a mop holder and a mop cover, the mop cover comprising a large area backing textile (2) having longitudinal edges (3) and transversal edges (4) and having a mopping side (5) which is active in cleaning and a top side (6) which is used to attach the mop cover (1) to the mop holder (7) of the mopping device, wherein on the top side (6) of the backing textile (2) are provided attachment means (14) located at or near to the transversal edges (4) of the backing textile (2), and retaining means (15) extending essentially parallel, to the longitudinal edges (3) of the backing textile (2) at a transverse distance between the retaining means (15) that is a little bit larger than the effective transverse distance of the longitudinal edges (12) of the mop holder (7) in the operative position thereof, wherein the attachment means (14) define free edges (16) where the mop holder (7) enters the attachment means (14) while attaching the mop cover (1) to the mop holder (7). This flat mop cover is improved by a structure where there is one attachment means (14) at each corner of the backing textile (2) assigned to a corresponding corner of the mop holder (7) and each attachment means (14) is attached to the top side (6) of the backing textile (2) in a way that the free edge (16) thereof runs at an acute angle relative to the neighbouring longitudinal edge (3) and transversal edge (4) of the backing textile (2).
