Abstract (en)

[origin: DE102005004943A1] The device has a lashing device with a oblong lashing unit and a clamping bolt that includes a connection part (15) and a threaded shaft (16). A clamping unit and a closure unit are removably attached to the threaded shaft. The clamping unit partly encloses the shaft. The clamping unit together with the lashing unit completely encloses the shaft. The clamping unit and the lashing unit are seperable from each other. An independent claim is also included for a method for protecting a lashing device for a container that is accumulated at board of a ship.
