Abstract (en)

[origin: WO2006069557A1] The invention relates to a device for transporting, transferring, storing, removing and unloading transport units comprising two lower parallel longitudinal girders between which a platform (1) is arranged in such a way that it is vertically movable at low heights by means of lifting devices (9) and are provided with driven roller paths. Two top girders are mounted at a certain height above the two lower girders (2) and are rigidly connected thereto by means of a plurality of vertical supporting elements. Two lifting devices (9) are arranged on both sides, respectively. Vertical guiding elements are arranged on both sides of the device in a parallel position with respect to said vertical supporting elements between the lower (2) and corresponding top (3) girders.
