Abstract (en)
[origin: DE102005004957A1] The hinge has forficate hinged brackets (3-5) connected with each other, where one bracket includes a radial cam. The radial cam operates along with a roller pivoted at a rocker arm. The arm presses the roller against the cam based on the spring effect. The brackets assume different positions and form different intermediate spaces when the hinge is in an open position, where the spaces are covered by a lateral protection plate.
