Abstract (en)

[origin: WO2006077060A1] The invention relates to a point holder (1) for holding glass panes in a bending free manner, comprising a glass pane which is arranged between clamp fittings (2) and a universal joint (3) which is in the form of a connecting element (4) which comprises a spherical head (6) and which can be connected to a clamp fitting (2). The invention is characterised in that the spherical head (6) is mounted in a hollow spherical half shell (5) which is divided into two hollow spherical half shells (8,9) in an orthogonal manner in relation to the longitudinal axis (7) of the connecting element (4), and which can be adjusted in relation to each other by means of an adjusting element (10).
