Abstract (en)
[origin: WO2006076982A1] The invention relates to an ice preparation unit tray (1) comprising several compartments (4) which are shaped as a rotational body segment. When the contents of the compartment (4) are frozen, the tray (1) which is suspended in the frame (15) of an ice preparation unit, is pivoted about an axis which is parallel to the axis of the rotational body segment, until the openings of the compartment (4) are in the downward direction and the ice-cubes slide out from the compartments when heated.
