Abstract (en)

[origin: WO2006077552A1] The system and method of the present invention provide a single mixer (200-400) with significantly reduced noise performance at a low cost by adding a current control circuit (109) that reduces the current in at least the switching stage (103, 303, 403) during polarity changes of the local oscillator (LO) signal (104). Alternative embodiments (300- 400) are provided for a single mixer having significantly reduced noise wherein the low- noise characteristic is enhanced by a further modification to the switching stage (303-403).
