Abstract (en)

[origin: DE102005007419A1] The method involves monitoring the functioning of terminals, an intermediary, and hardware units by a monitoring function. The functional hardware units (15) take up the physical functions of the failed hardware units (14). A message is transmitted to the terminals by the functional units. Characteristics of one of the failed units are transmitted to one of the functional units during an on-going transaction.
