Abstract (en)
[origin: EP1844749A1] A body vibration machine includes two vibrating plates respectively and independently assembled at the location on which user's feet step. The two vibrating plates are respectively supported by elastic support members, and two vibration driving device (like vibration motors) are respectively installed under the vibrating plates. The two vibrating plates can be respectively modulated in vibration frequency and controlled to start or stop operating according to user's need.
