Abstract (en)

[origin: EP1844865A1] The method involves referring, linking and storing the inspection results with recognizable individual differences, identifier of an individual object, obtained by the inspection system, where the connected individual object (2) are not provided with invalid markings. The data records transfers as indirect electronic marks to sort electronics of the sorting system. The already transported individual object is recognized due to its identifier by an identification sensor, and are sorted by an activating a signal corresponding to the respective stored test results.
