Abstract (en)

[origin: EP1844950A1] The lid (1) has a monoblock type disk shaped lid body (17) including return supports (16) that are arranged transversally with respect to a U-shaped draw bar (21), where the supports are raised with respect to an opening plane and are arranged at the level of a preset height. The draw bar is movable between the level of height of the supports and the plane, such that the supports are in contact with the bar for plating a flat closing element (12) during the displacement of the draw bar in the direction of closing a fluid product e.g. varnish, discharge orifice.
