Abstract (en)
[origin: EP1845005A2] The method involves fitting a frame with a cabin or container, in a vehicle. Guide-way slide devices are aligned to a guide-way run by a unit to adjust a position between the guide-way slide device and rails parallel before a guide-way contact. A movement of transport members is divided in such a manner which is effected by push and pull devices in a vertical plane and in a horizontal plane. A carrying cable is used instead of guide-way rails (22, 23).
