Abstract (en)

[origin: EP1845216A2] The support has a recess (6) that is arranged in a support socket (2) and runs in a longitudinal direction of the support and perpendicular to a base plate (1). A cap-shaped support plate has a stud, where an outer contour of the stud corresponds to the recess in the support socket and has a length larger than the height of the support plate. The support socket has an outer thread that is complementary to an inner thread of a hollow cylindrical intermediate piece.
