Abstract (en)

[origin: EP1845218A2] The installation (I) has a winding tube (1) arranged inside a box (2) that is fixed on a wall of a building (B) and including a driving actuator (6) that drives in rotation with the tube. A striking bar (5) is supported by folded and articulated arms (4), and a blind fabric (3) is integrated from the bar and is selectively wound on the tube. An electromechanical locking device (11) locks the arms in different positions corresponding to partial or total deployment of a flat roof blind. A solar panel (8) electrically supplies the actuator of the tube. An independent claim is also included for a method of controlling a motorized blind installation.
