Abstract (en)
[origin: US2008105156A1] The present invention relates to a rail element, which has a connecting means (2) and is adapted to be connected to a second rail element (12) to form a toy railway. The rail element consists of a ramp element (1) having a ramp surface (3) which rises obliquely upwards from the base plane of the rail element, towards the connecting means (2). The rail element also has first and second border parts (8, 9) with first and second border surfaces (10, 11), which rise from the ramp surface (3) and are oriented towards the same. The distance between the border surfaces (10, 11) decreases towards the connecting means (2).
