Abstract (en)
[origin: DE202005001641U1] The holder (1) for the matrix-assisted laser desorption and ionization (MALDI) chip (6) has resting surfaces (2, 3) and a moveable fastener (4). The fastening presses the chip against the resting surfaces. The holder has a resting surface (5). The resting surfaces (2, 3) are contacted such that the chip is pressed against this surface (5). A further resting surface (7) of the fastening, is complementary to the corner (8) of the chip. The arrangement holds the chip permanently against the surface (5). The fastening is a slide (4). It is spring-loaded towards the resting surfaces (2, 3).
