Abstract (en)
[origin: DE102005007934B3] Directing table (17) comprises a bearing surface curved in the conveying direction (15) so that a distance (d) measured between a point and the axis in the direction of the longitudinal axis (16) is kept constant when the wood product is moved on the aligning arm (40r, 40l). Preferred Features: The axis is formed in the direction of the longitudinal axis so that the distance (d) is kept constant when the pivoting angle of the aligning arm is changed as a result of an edge being inclined at a angle to the longitudinal axis.
