Abstract (en)

[origin: WO2006072750A1] The invention relates to a case for packaging and dispensing products, such as granules, towelettes, bandages or powders. The inventive case comprises: an envelope, the main face (1) of which is equipped with a window (2) that is used to display and remove the products; and a flap (7) which is designed to cover the window in the closed position. The invention is characterised in that: the outer surface of the peripheral edge (5) of the window and the opening formed by the window are covered with a seal (3) comprising a main zone (4) that extends into a tab, such that the central zone is solidly connected to the peripheral edge of the window, but the tab (6) is not solidly connected to the outer surface of the envelope; and the flap (7) is formed by an adhesive label that is affixed to the main face of the envelope including the seal (3).
