Abstract (en)

[origin: DE102005004327A1] The injector has an injector body (110) with two functional units (148, 150) respectively including two electrically controllable valves, where the functional unit (150) is different from the functional unit (148). The functional units are reversibly connected by a non-positive connecting unit (152) and a positioning pin at a butt joint (126), and separately produced and tested, where the connecting unit has a coupling nut. An independent claim is also included for a method for producing a fuel injector.
