Abstract (en)

[origin: WO2006081884A1] The invention relates to a kitchen vapor aspiration device comprising at least one flat, filter element (12a - 12d) which is arranged in a vapor capture shield (10a - 10d) and which is arranged in an airflow (16a - 16d) produced by a ventilator (14a - 14d). In order to provide a kitchen vapor aspiration device that has a particularly homogeneous airflow (16a - 16d) profile without detracting from the capacity of said device to pick up fat or detracting from the effective filter surface of the filter element (12a - 12d), at least one means (18a - 18d) for homogenizing the airflow (16a - 16d) is arranged downstream from the filter element (12a - 12d) in the direction of the airflow (16a - 16d).
