Abstract (en)

[origin: WO2006079277A1] A system, device and method for encrypting plaintext information securely. The system includes a transmitting agent to generate and synchronise a first cipher stream using the plaintext information and a first key, to generate and synchronize a second cipher stream using a second key and a randomizing function to randomize and synchronize a controllable plaintext stream to form a second synchronized cipher stream, and to operate on the plurality of first and second cipher streams using an exclusive disjunction operator to obtain a ciphertext stream; and a receiving agent to decrypt the ciphertext stream.
