Abstract (en)
[origin: EP1847205A1] Taught herein is a roll holder comprising a body and a shaft, the body comprising a left stop-plate, a right stop-plate, and a wall plate; a pair of symmetric to each other runners is disposed on the left stop-plate and the right stop-plate; the front portion of the runner is higher than the end portion thereof; both ends of the shaft are rotably or rollingly attached to the runners at both sides of the body, respectively; and a protrusion parallel to the shaft is disposed on the body. The invention overcomes disadvantages found in prior art, and provides a roll holder with the help of which rollable material may be cut or thorn using one hand only which makes the use very convenient. The solution uses a mobile shaft structure cooperating with a protrusion on the body and combining the slideway with the shaft.
