Abstract (en)
[origin: EP1847466A2] It is made by means of a perimetric profile (3), which embraces a number of support blocks (2), which are fixed to the profile by means of gluing. The profile is preferably of C or U-shape, and the horizontal inner section (4) of the profile is equipped with various cross-directional creasing lines (5), ending at angular cuttings (7) in the vertical walls (6) of the perimetric profile (3). In addition, the perimetric profile can have a reinforcement lining incorporated (13). The ends (11) of the perimetric profile (3) can with advantage be united in the middle of the top of one of the blocks (2). The pallet legs, positioned parallel to each other, are fixed to a pallet deck or platform (1), in order to build a pallet. The gluing contact area between the pallet legs and the pallet platform (1), and the stiffness of the pallet is improved.
