Abstract (en)  
[origin: EP1847506A2] The winch has a fixation chassis carrying a winching assembly and a cable storage assembly with a removable storage drum. The winching assembly has a compact hydraulic motor for rotating a winching pulley including a peripheral groove in which a traction cable is wound. An inclined lateral guiding ramp (19) allows a strand of the traction cable to rewind on the drum to laterally leave the groove. The ramp is extended towards a space occupied by the drum and is formed in a guiding piece (20) fixed on a cable retaining assembly by a transversal axle (21).
