Abstract (en)

[origin: EP1847659A1] The method involves arranging interjoists between parallel reinforced concrete beams (1) that are separated from determined interval (l) and supported by a supporting structure (2). Prefabricated load-bearing slabs (40) are arranged in an adjacent manner and perpendicular to the beams for forming a dry floor (10), where each of the slabs covers two adjacent beams and rests on top of the beams. An independent claim is also included for a prefabricated dry floor comprising beams.
