Abstract (en)

The device has cylindrical rims (70) at upstream ends of ring sectors (20) and engaged on a casing rail (50). Each cylindrical rim comprises an annular collar (72) extending radially outward and axially clamped on the casing rail using an annular locking unit (80), which is axially engaged on the casing rail and on the rims of the ring sectors. The locking unit exerts axial force directed, in a downstream direction, toward the annular collars during functioning of a turbomachine. An independent claim is also included for a ring sector for a turbine of a turbomachine.

Abstract (fr)

Dispositif de fixation de secteurs d'anneau (20) sur un carter (16) de turbine dans une turbomachine, comprenant aux extrémités amont des secteurs d'anneau (20) des moyens circonférentiels (70, 72) d'accrochage engagés sur un rail de carter (50) et serrés axialement sur le rail de carter par un organe annulaire de verrouillage (80) à section en C engagé axialement sur le rail de carter et sur les moyens d'accrochage des secteurs d'anneau.
