Abstract (en)

[origin: EP1847770A1] The bracket has a lamp (1) assembled at a case, and a base (13) comprising a gripping handle (50) composed of two ramp portions symmetrical with respect to a longitudinal axis defined by the bracket which is made of a plastic material. The ramp portions comprise respective helicoid portions and support surfaces (53, 54), which are oriented in a locking direction of the bracket. The helicoid portions provide a contact surface parallel to the locking direction, and the support surfaces permit to pivot the bracket around a rotation axis in the locking direction.
