Abstract (en)

[origin: WO2006087081A1] The invention relates to a method for controlling an air flow in the interior of a motor vehicle, and a device for implementing said method. Said method is characterised in that, when a threshold speed is exceeded, the storage of an error message in an air conditioning control appliance is prevented. To this end, the inventive device comprises corresponding sensor systems for defining parameters used to determine the threshold speed.
