Abstract (en)  
[origin: WO2006084127A2] A clip for enclosing bags and tubes, including bags and tubes made of mesh netting, is described. The clip has a top section and two legs extending from opposite ends of the top section. There is an indentation in the top section and a pin projecting from the top section into the space formed by the top section and the legs of the clip. Closing the clip causes the pin to project into the annular space formed by the top section and the collapsed legs. A clipper has a guide rail with a protrusion corresponding to the indentation and a rail with a notch corresponding to the pin, to provide better control movement of the clip within the clipper.
