Abstract (en)

[origin: WO2006075233A2] The neck of a container for free-flowing food products appears as a duct (1), composed of a tubular element (6) and a connecting portion (7) that combine to establish a flow passage (8) between the container and the surrounding environment; the connecting portion (7) is moulded in one piece with the tubular element (6) and presents a mating surface (11) sealable hermetically to an outlet portion (5) of the container. The mating surface (11) consists of low density polyethylene, whilst the duct (1) includes at least one material of strength superior to that of low density polyethylene.
