Abstract (en)

[origin: WO2006081852A1] The invention relates to a top cylinder carrier (1) for drafting systems in spinning machines, comprising at least one pair of feeding cylinders, one pair of apron cylinders and one pair of output cylinders and top cylinder holding devices, wherein the top cylinders are mounted in such a manner that they are rotatable on the ends of axes (5, 6) which are centrally supported between the top cylinders, respectively. A common holding device (2) is provided for the axis (5) of the output cylinders (8) and for the axis (6) of the apron cylinders (7) and is movably connectable to the top cylinder carrier (1), wherein said axes (5, 6) are mutually offset at a fixed distance therebetween.
