Abstract (en)

[origin: WO2006084578A1] The invention relates to a double-apron draft system comprising a bottom apron guide that can be dismantled, said bottom apron encompassing a lower roll (4) and a deflection element (11, 11'). The deflection element (11, 11') can be dismantled parallel to the axial direction of the lower roll (4) without the bottom apron (6). The system is equipped with elements (15) for positioning the deflection element (11, 11'), which ensure that the deflection element can be repositioned in a predefined target position, when the deflection element (11, 11') is reinstalled. The positioning elements (15) have an adjustable target position. In addition, the positioning elements (15) of the deflection element (11, 11') contain an adapter (17), which is displaceable in relation to the lower roll (4). The adapter contains plug-in connectors (19) for connecting the deflection element (11, 11'), said connectors enabling the deflection element (11, 11') to be detached from the adapter and dismantled without modifying the target position (17).
