Abstract (en)
[origin: US2008130291A1] A built-in lamp includes a housing and a holder for fastening in a built-in surface, such as a room ceiling. The built-in lamp also includes a light source socket for holding a light source and a light source region and a direct light reflector. The direct light reflector has a direct light reflector opening which is disposed in the direction of illumination which defines a direct light exit region and which is surrounded at least reasonably by a diffused light exit region. The direct light reflector has a rear opening. The head reflector is disposed on the side of the light source region remote from the direct light exit region. The head reflector is separate from the direct light reflector and is shaped such that it directs at least a large portion of the light emitted from the light source region and incident on to it into the inner space of the direct light reflector
