Abstract (en)
[origin: WO2006120088A1] The invention relates to a refrigeration device (1) which comprises at least one interior (3), surrounded by a heat-insulating housing (4) and cooled by circulating cooling air. A cooling air channel (23) distributing the cooling air is located in a wall (27) of the heat-insulating housing (4). The cooling air channel (23) is configured by a first, elongate channel element (25) and a plurality of identical, second channel elements (26) that are distributed along the first channel element (25) and that allow the first channel element and air passages (37) in an inner container (8) surrounding the interior (3) to communicate.
