Abstract (en)

[origin: WO2006064012A1] The invention concerns a multiband microwave transceiver device, MMT, comprising: a circuit for coupling with an antenna, A₁, operating in a frequency range G₁ corresponding to multimedia services, to rich media services (synchronized image and Internet), and a circuit for coupling with an antenna, A₂, adapted to operate in a frequency range G₂ corresponding to Internet and voice services, a circuit for coupling with an antenna, A₃, adapted to operate in a range G₃ and allowing direct operation with a commercial WIMAX in said band via the BIS frequency; frequency synthesizers adapted to conversions and amplification conversion circuits in both directions: low conversion of 40 GHz into BIS frequency; low conversion of 10 GHz into 3.5 GHz; high conversion 3.5 GHz into 10 GHz.
