Abstract (en)
[origin: EP1849382A1] The invention has a modular profile body, based on two cylindrical lateral sections and an intermediate section of prismatic configuration and of perceptibly smaller height, with suitable elasticity characteristics, in such a way that when the user rests his/her head, in any position, it has equal pressure over the entire surface of contact. The pillow may have a modular structure based on two basic elements, namely a half-pillow and a laminar section, capable of being selected in number and shape based on the desired elasticity and height.
