Abstract (en)
[origin: EP1849502A1] The belt (10) has a material e.g. descender, carrying device (330) with a U-shaped hooking loop integrated to the belt by fixation units. The device has a connection piece made of flexible textile matter and a preformed stiffening element made of semi-rigid plastic material. The connection piece and the stiffening element have respective ends housed in a maintenance gusset (24) fixed to the belt for inserting the piece and the element one into the other so as to form a non-articulated connection stressing the device in a projected position.
