Abstract (en)

The invention relates to a cork-decontamination method and installation comprising a vibrating device. The inventive method consists in subjecting cork pieces to be decontaminated to a controlled vibration and performing the following phases in a combined or alternating manner, namely: a) bringing the cork into contact with an aqueous liquid inside a first tank and generating a vacuum therein under a temperature control; b) letting the soaked cork to stand or rest; and c) eliminating the absorbed liquid which contains pollutant substances.
