Abstract (en)
A hand-held vessel that is comprised of a bottom (2) with four side walls attached to the bottom, with the whole forming a cavity. The back wall (3) has a lip (7) extending outwards. The front wall (6) of the vessel is sloped outwards from the cavity and has a flat surface as opposed to the back wall and the two side walls of the vessel that are curved. The lip extends the long the top of the back wall and has an elliptical hole (8) that is positioned in the middle with the axis of that elliptical hole following the axis of the lip. The elliptical hole accepts the thumb or either the left or the right hand and the curved outer surface of the vessel provides a natural position for the fingers to curve around the vessel.
