Abstract (en)  
[origin: EP1849679A1] A system detects a foreign object within a protected area of a railroad level-crossing. The system comprises a control unit (3), and at least one sensor (4) arranged on a level-crossing barrier (8), said system being configured to: detect a specific object (9) during a function test of the system, when the level-crossing barrier (8) is in a first position (P1), and detect a foreign object within the protected area, when the level-crossing barrier (8) is in a second position (P2).
